Google

Engineering Manager / Senior Staff Software Engineer

from April.2011

Seasoned engineering manager for large teams, managing 100+ software engineering reports (8 large teams) for a few years. Over the last decade I worked on a wide range of Google products, including YouTube, Google Travel, Google Assistant and Gemini. Always reached highest scores on organizational metrics like Management Feedback Score.

Built and led large-scale successful teams landing 200+ engineers projects including closely collaborating across functions, product areas, and locations. Was responsible for building new and advancing existing products that serve hundreds of millions of users across billions of devices.

My job duties include creating system architecture and aligning on technical project plans within and outside the Product Area, e.g. with Hardware, Android, Google Search; and preparing and presenting to Google (S)VPs.

Currently responsible for a large part of Gemini Mobile, including managing teams responsible for all Gemini Android, iOS, Gemini Live launches. TL for Gemini experience OEM expansion, including leading engineering work with top mobile manufacturers like Samsung, Lenovo, Motorola, Xiaomi. Recently landed Gemini on flagship Motorola and Samsung phones (Motorola first Gemini preload, Samsung Unpacked for Flip/Fold 6).

I have deep expertise in AI integration, voice assistants (incl. speech recognition, natural language understanding, text-to-speech integration), reliability & system health, policy & privacy (incl. GDPR & DMA) and end-to-end product development (backend, web, Android and iOS).

Led cross-company engineering workstreams with external travel industry leaders (including United Airlines), chipset makers (including Realtek), hardware manufacturers (including Samsung). As a responsible tech lead and system architect I frequently represent Google engineering with partners.

Member of or lead for numerous technical review boards, diversity+inclusion working groups and organizational committees.

Qik

Engineering Manager

from August.2008 to April.2011

Qik, Inc. was a world leader in mobile video streaming. We developed innovative solutions that enabled our customers to live stream and share videos from their cell phones. I was responsible for all mobile client development, including Android, iPhone, Symbian, Maemo, Samsung, LG, and BlackBerry. I managed a team of 15 engineers.

App was featured by Google on Android Market, reached #1 paid worldwide on Apple App Store. The company was acquired by Skype in 2011.

SOLUTION TLB GROUP

Start-up Founder

from November.2005 to August.2008

Start-up company focused on mobile applications. Developed "Solution", a comprehensive mathematics application for Symbian OS Nokia Series 60 (ARM) mobile phones. Solution helped users perform a variety of mathematical operations and analyze the results.

In 2007, Solution entered the world's top-100 best-selling applications (Handango's rating), reaching 64th place.

Dragon Software

Software Developer Intern

from October.2003 to October.2005

First internship. Developed many key features of the graphic editor, including a variety of graphical tools and filters. Created a version of the application for Nokia Series 60 mobile phones.

Education

MSc in Computer Science, Software Development.

Hobbies & Sports

Running, cycling, skiing and rowing.
